Abstract

Systems and methods whereby a user can learn of users with whom she is socially-related. For example a user might learn of users with whom she shares common acquaintances and/or with whom she shares having met various individuals. Further, systems and methods whereby a user can learn, for a specified user, if she and that specified user are socially-related. Through such queries, the user might also learn of the identities of the common acquaintances and/or commonly-met individuals. Additionally, systems and methods whereby access to data stored on a machine associated with a user, such as the user's terminal, may be controlled, and systems and methods whereby a terminal user can learn if she is in the proximity of people that she had previously met. Also, systems and methods whereby a user can receive various socially-relevant recommendations, and systems and methods that allow for the execution of scripts.
